EC-Council

Domains	Sub Domain	Description	Number of Questions	Weightage
1. Governance, Risk, Compliance	Governance	 Define, implement, manage and maintain an information security governance program that includes leadership, organizational structures, and processes. Align information security governance framework with organizational goals and governance, i.e., leadership style, philosophy, values, standards, and policies. Establish information security management structure. Establish a framework for information security governance monitoring (considering cost/benefits analyses of controls and ROI). Understand standards, procedures, directives, policies, regulations, and legal issues that affect the information security program. Understand the enterprise information security compliance program and manage the compliance team. 	11	21%
	Risk Management	 Create a risk management program policy and charter Create a risk assessment methodology and framework Create and manage risk register Create risk assessment schedule and check lists Create risk reporting metrics and processes 	11	
	Compliance	 Analyze and understand common external laws, regulations, standards, best practices applicable to the organization, and organizational ethics. Be familiar with international security and risk standards such as ISO 27000 and 31000 series Implement and manage information security strategies, plans, policies, and procedures to reduce regulatory risk Understand the importance of regulatory information security organizations and appropriate industry groups and stakeholders 	10	

		Understand information security changes, trends, and best practices		
		 Understand and manage enterprise 		
		compliance program controls, information		
		security compliance process and		
		procedures, compliance auditing, and		
		certification programs		
		 Understand the information security 		
		compliance process and procedures		
		Compile, analyze, and report compliance		
		programs		
		 Understand the compliance auditing and 		
		cortication programs		
		Follow organizational ethics		
2. Information	Information	Identify the organization's operational	16	20%
Security Controls and	Security	process and objectives		
Audit Management	Management	Design information systems controls in		
	Controls	alignment with the operational needs and		
		goals and conduct testing prior to		
		implementation to ensure effectiveness		
		Identify and select the resources required		
		to effectively implement and maintain		
		information systems controls. Such		
		resources can include human capital,		
		information, infrastructure, and		
		architecture (e.g., platforms, operating		
		systems, networks, databases, applications)		
		Design and implement information systems		
		controls to mitigate risk. Monitor and		
		document the information systems control		
		performance in meeting organizational		
		objectives by identifying and measuring		
		metrics and key performance indicators		
		Design and conduct testing of information		
		security controls to ensure effectiveness,		
		discover deficiencies, and ensure alignment		
		with the organization's risk management		
		program		
		Design and implement processes to		
		appropriately remediate deficiencies and		
		evaluate problem management practices to		
		ensure that errors are recorded, analyzed,		
		and resolved in a timely manner		

	Audit Management	 Assess and implement tools and techniques to automate information systems control processes. Measure, manage, and report on security control implementation and effectiveness Understand the IT audit process and be familiar with IT audit standards Apply information systems audit principles, skills and techniques in reviewing and testing information systems technology and applications to design and implement a thorough risk-based IT audit strategy Execute the audit process in accordance with established standards and interpret results against defined criteria to ensure that the information systems are protected, controlled and effective in supporting organization's objectives Evaluate audit results, weighing the relevancy, accuracy, and perspective of conclusions against the accumulated audit evidence Assess the exposures resulting from ineffective or missing control practices and formulate a practical and cost-effective plan to improve those areas Develop an IT audit documentation process and share reports with relevant stakeholders as the basis for decision-making Ensure that the necessary changes based on the audit findings are effectively implemented in a timely manner 	14	
3. Security Program Management & Operations	Security Program Management	 For each information systems project develop a clear project scope statement in alignment with organizational objectives Define activities needed to successfully execute the information systems program, estimate activity duration, and develop a schedule and staffing plan Develop, manage and monitor the information systems program budget, estimate and control costs of individual projects 	16	21%

	 Identify, negotiate, acquire and manage the resources needed for successful design and implementation of the information systems program (e.g., people, infrastructure, and architecture) Acquire, develop and manage information security project team Assign clear information security personnel job functions and provide continuous training to ensure effective performance and accountability Direct information security personnel and establish communications, and team activities, between the information systems team and other security-related personnel (e.g., technical support, incident management, security engineering) 		
Security Program Operations	 Resolve personnel and teamwork issues within time, cost, and quality constraints Identify, negotiate and manage vendor agreement and community Participate with vendors and stakeholders to review/assess recommended solutions; identify incompatibilities, challenges, or issues with proposed solutions Evaluate the project management practices and controls to determine whether business requirements are achieved in a cost-effective manner while managing risks to the organization Develop a plan to continuously measure the effectiveness of the information systems projects to ensure optimal system performance Identify stakeholders, manage stakeholders' expectations, and communicate effectively to report progress and performance Ensure that necessary changes and improvements to the information systems processes are implemented as required 	15	

4.6				400/
4. Information Security Core Competencies	Access Control	 Identify the criteria for mandatory and discretionary access control, understand the different factors that help in implementation of access controls and design an access control plan Implement and manage an access control plan in alignment with the basic principles that govern the access control systems such as need-to-know Identify different access control systems such as ID cards and biometrics Understand the importance of warning banners for implementing access rules Develop procedures to ensure system users are aware of their IA responsibilities before 	2	19%
	Social Engineering, Phishing Attacks, Identity Theft	 Understand various social engineering concepts and their role in insider attacks and develop best practices to counter social engineering attacks Design a response plan to identity theft incidences Identify and design a plan to overcome phishing attacks 	3	
	Physical Security	 Identify standards, procedures, directives, policies, regulations, and laws for physical security Determine the value of physical assets and the impact if unavailable Design, implement and manage a comprehensive, coordinated, and holistic physical security plan to ensure overall organizational security including an audit schedule and performance metrics 	2	
	Disaster Recovery and Business Continuity Planning	 Develop, implement, and monitor business continuity, business recovery, contingency planning, and disaster recovery plans in case of disruptive events and ensure alignment with organizational goals and objectives Direct contingency planning, operations, and programs to manage risk Design documentation process as part of the continuity of operations program 	2	

Firewall, IDS/IPS and Network Defense Systems	 Design and execute a testing and updating plan for the continuity of operations program Understand the importance of integration of IA requirements into the Continuity of Operations Plan (COOP). Understand and manage network cloud security Identify the appropriate intrusion detection and prevention systems for organizational information security Design and develop a program to monitor firewalls and identify firewall configuration issues Understand perimeter defense systems such as grid sensors and access control lists on routers, firewalls, and other network devices Identify the basic network architecture, 	3	
	models, protocols and components such as routers and hubs that play a role in network security		
	 Understand the concept of network segmentation 		
	 Manage DMZs, VPN and telecommunication technologies such as PBX and VoIP 		
	 Identify network vulnerabilities and explore network security controls such as use of SSL and TLS for transmission security 		
	Support, monitor, test, and troubleshoot issues with hardware and software		
	 Manage accounts, network rights, and access to systems and equipment 		
Wireless	Identify vulnerability and attacks associated	2]
Security	with wireless networks and manage		
 	different wireless network security tools		
 Virus, Trojans	Assess the threat of virus, Trojan and	3	
and Malware,	malware to organizational security and		
and other	identify sources and mediums of malware		
Malicious Code	infection		
Threats	Deploy and manage anti-virus systems		
	Develop process to counter virus, Trojan,		
	and malware threats including training		

	1	Total State	ı	
		both security teams and non-security		
Best and Web	Practices Securing lications	teams on security teams and non-security teams on secure development processes Develop and maintain software assurance programs in alignment with the secure coding principles and each phase of System Development Life Cycle (SDLC) Understand various system-engineering practices Configure and run tools that help in developing secure programs Understand software vulnerability analysis techniques including static code, dynamic	2	
05.1	• • • • • • • • • • • • • • • • • • •	code, and software composition analysis. Install and operate the IT systems in a test configuration manner that does not alter the program code or compromise security safeguards Identify web application vulnerabilities and attacks and web application security tools to counter attacks		
OSF	lardening •	Identify various OS vulnerabilities and attacks and develop a plan for hardening OS systems Understand system logs, patch management process and configuration management for information system security	2	
Tech	yption inologies	Understand the concept of encryption and decryption, digital certificates, public key infrastructure and the key differences between cryptography and steganography Identify the different components of a cryptosystem Develop a plan for information security encryption techniques	2	
Asse and	erability essment etration ing •	Design, develop and implement a penetration testing program based on penetration testing methodology to ensure organizational security Identify different vulnerabilities associated with information systems and legal issues involved in penetration testing Develop pre and post testing procedures	2	

		 Develop a plan for pen test reporting and implementation of technical vulnerability corrections Develop vulnerability management systems Create and manage a threat management program including threat intelligence, third-party threats, and security bulletins regarding hardware and software, 	2	
		particularly open-source software		
F	Response and Computer Forensics	 Develop a plan to identify a potential security violation and take appropriate action to report the incident Comply with system termination procedures and incident reporting requirements related to potential security incidents or actual breaches Assess potential security violations to determine if the network security policies have been breached, assess the impact, and preserve evidence Diagnose and resolve IA problems in response to reported incidents 	2	
		and process digital evidence		

		 Configure and use various forensic investigation tools Design anti-forensic techniques 		
5. Strategic Planning, Finance, Procurement, and Third-Party Management	Strategic Planning	 Design, develop and maintain enterprise information security architecture (EISA) by aligning business processes, IT software and hardware, local and wide area networks, people, operations, and projects with the organization's overall security strategy Perform external analysis of the organization (e.g., analysis of customers, competitors, markets and industry environment) and internal analysis (risk management, organizational capabilities, performance measurement etc.) and utilize them to align information security program with organization's objectives Identify and consult with key stakeholders to ensure understanding of organization's objectives Define a forward-looking, visionary and innovative strategic plan for the role of the information security program with clear goals, objectives and targets that support the operational needs of the organization Define key performance indicators and measure e effectiveness on continuous basis Assess and adjust security resources to ensure they support the organization's strategic objectives Monitor and update activities to ensure accountability and progress 	10	19%
	Finance	 Analyze, forecast and develop the operational budget of the security department Acquire and manage the necessary resources for implementation and management of information security plan Allocate financial resources to projects, processes and units within information security program Monitor and oversee cost management of information security projects, return on 	9	

- investment (ROI) of key purchases related to IT infrastructure and security and ensure alignment with the strategic plan
- Identify and report financial metrics to stakeholders
- Balance the IT security investment portfolio based on EISA considerations and enterprise security priorities
- Understand the acquisition life cycle and determine the importance of procurement by performing Business Impact Analysis
- Identify different procurement strategies and understand the importance of costbenefit analysis during procurement of an information system
- Understand the basic procurement concepts such as Statement of Objectives (SOO), Statement of Work (SOW), and Total Cost of Ownership (TCO)
- Collaborate with various stakeholders (which may include internal client, lawyers, IT security professionals, privacy professionals, security engineers, suppliers, and others) on the procurement of IT security products and services
- Include risk-based security requirements in acquisition plans, cost estimates, statements of work, contracts, and evaluation factors for award, service level agreements, and other pertinent procurement documents
- Design vendor selection process and management policy
- Develop contract administration policies that direct the evaluation and acceptance of delivered IT security products and services under a contract, as well as the security evaluation of IT and software being procured
- Develop measures and reporting standards to measure and report on key objectives in procurements aligned with IT security policies and procedures

	•	Understand the IA security requirements to		
		be included in statements of work and		
		other appropriate procurement documents		
Third	Party •	Design third party selection process	9	
Man	agement •	Design third party management policy,		
		metrics, and processes		
	•	Design and manage the third party		
		assessment process including ongoing		
		compliance management		
	•	Develop measures and reporting standards		
		to measure and report on key objectives in		
		procurements aligned with IT security		
		policies and procedures		
	•	Include risk-based security requirements in		
		acquisition plans, cost estimates,		
		statements of work, contracts, and		
		evaluation factors for award, service level		
		agreements, and other pertinent		
		procurement documents		
	•	Understand the security, privacy, and		
		compliance requirements to be included in		
		Statements of Work (SOW), Master Service		
		Agreements (MSA), and other appropriate		
		procurement documents
